

MASTER SOLUTIONS
FOR BUILDINGS

- High-Quality Production Mind
- Social Responsibility Sense
- Human and Environment Respects
- Sustainable Growth and Innovative Focus
- Honest and Reliable Business Ethics

ATISKAN

Certificated by TUV ISO 9000:2008
Quality Management System,
our company has such concept of quality and technology
according to International Standards.

With its honest and reliable name:

1999, started the production of Gypsum-based Building Products in Cukurhisar/Eskisehir

2005, well-proved itself to construction market and commissioned Cement-based Building Products plant with a 100.000 Tons/year capacity.

2007, with the sustained evolving quality and technology established the 2nd Plaster Plant and increased Gypsum-based Building Products capacity to 450.000 Tons/year.

2008, with the target of taking place in all areas of construction sector, started the production of Bitumen-based Waterproofing Membranes and Acrylic-based Building Products.

2010, with the innovative aspect, introduced the high quality Plasterboard Products to construction market, production by %100 German technology

MASTER SOLUTIONS FOR BUILDINGS

2014 started the production of Gypsum-based Ceiling Tiles with the target of reaching to top in all areas of construction sector.

TECHNICAL INFORMATION

Mixture Ratio	7.8lt Water / 10kg Atışkan Masterjet 7 Plaster
Setting Time	150 minutes
Fire Class	A1
Standard	TS EN 13279

QUALITY

TS EN
13279

CONSUMPTION

8kg/m² Atışkan Masterjet 7 Plaster for each 1cm thickness.

SHELF LIFE

6 months for storage in closed bag and humidity proof conditions.

PACKAGING

PALLET

BIGBAG

It is a gypsum-based mortar with perlite which can be apply up to 20mm thickness onto interior walls and ceilings, especially by machine spraying and also by hand.

BENEFITS

- Low consumption value, 8 kg/m²
- Much smooth and brilliant surface
- Ready to paint with one coat application.
- Reduces application process, save time and labour.
- Helps heat and sound insulation.
- A1 class non-combustible material.

APPLICATION AREAS

It can apply to brick, concrete, gas concrete, briquet etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow.

SURFACE PREPARATION

- Fractures, cracks and defects should be corrected on surface.
- Dry and hot surfaces should be wetted.
- Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.
- Atışkan Betonlak Plaster Primer should be used to improve adhesion on ceilings, smooth and absorbent surface applications.

APPLICATION

- Pour Atışkan Machine Spray Plaster into a machine container. Water ratio is adjusted by valve according to consistency.
- Metal bears should be used on walls to get the best result without wastage.
- Ready mixture can spray horizontally between metal bears and spread to the surface with a metal straight-edge by first levelling.
- After 30 minutes of the first levelling, second levelling should be apply on surface.
- After 45 minutes of the second levelling, surface is wetted and floated with rubber trowel.
- After 15 minutes of the floating process, obtain a smooth final surface with stell trowel.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- Water adjustment of machine should be checked frequently.
- Avoid contact with skin and eyes. In case of contact wash with plenty of water.

APPLICATION LIMIT

- Do not use any place except where application areas noted.

MACHINE SPRAY PLASTER

It is a gypsum-based mortar with perlite which can be apply between 10-30mm thickness onto interior walls and ceilings by machine spraying.

BENEFITS

- Gives smooth and brilliant surface ready to paint with one coat application.
- Reduces application process, save time and labour.
- Stabilize ambient humidity.
- Helps heat and sound insulation.
- A1 class non-combustible material.

APPLICATION AREAS

- It can apply to brick, concrete, gas concrete, briquet etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow.

SURFACE PREPARATION

- Fractures, cracks and defects should be corrected on surface.
- Dry and hot surfaces should be wetted.
- Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.
- Atışkan Betonrakı Plaster Primer should be used to improve adhesion on ceilings, smooth and absorbent surface applications.

APPLICATION

- Pour Atışkan Machine Spray Plaster into a machine container. Water ratio is adjusted by valve according to consistency.
- Metal bears should be used on walls to get the best result without wastage.
- Ready mixture can spray horizontally between metal bears and spread to the surface with a metal straight-edge by first levelling.
- After 30 minutes of the first levelling, second levelling should be apply on surface.
- After 45 minutes of the second levelling, surface is wetted and floated with rubber trowel.
- After 15 minutes of the floating process, obtain a smooth final surface with steel trowel.

CAUTIONS

PLASTER PRODUCTS 01

HAND PLASTER

It is a gypsum-based mortar with perlite which can be apply between 5-20mm thickness onto interior walls and ceilings by hand.

BENEFITS

- Stabilize ambient humidity.
- Helps heat and sound insulation.
- A1 class non-combustible material

APPLICATION AREAS

It can apply to brick, concrete, gas concrete, briquet etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow.

SURFACE PREPARATION

- Fractures, cracks and defects should be corrected on surface.
- Dry and hot surfaces should be wetted.
- Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.
- Atışkan Betontak Plaster Primer should be used to improve adhesion on ceilings, smooth and absorbent surface applications.

APPLICATION

- Fill fresh water into a clean container according to amount of mixture will prepared, approx. 6lt Water / 10kg
- Atışkan Hand Plaster sprinkles to cover the surface of water.
- After waiting for 2 minutes, slurry is stirred until it becomes homogeneous.
- The mixture is ready to be used within 60minutes.
- Metal bears should be used on walls to get the best result without wastage.
- Ready plaster can apply between metal bears using hand hawk and steel trowel.
- Levelling off the plaster with a metal straight-edge obtains a smooth surface.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- Avoid contact with skin and eyes. In case of contact wash with plenty of water.

PLASTER PRODUCTS

SATIN FINISHING PLASTER

ATIŞKAN
BUILDING
MATERIALS

PLASTER PRODUCTS 01

SATIN FINISHING PLASTER

It is a gypsum-based final coat finishing mortar which can be apply between 0-2mm thickness onto interior walls and ceilings by hand.

BENEFITS

- With the fine particule structure, obtains silky and esthetic texture.
- The smooth surface provides saving which prepared for painting.
- A1 class non-combustible material.

APPLICATION AREAS

It can apply on concrete, gas concrete, plaster, gypsumboard etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow

SURFACE PREPARATION

- Dry and hot surfaces should be wetted.
- Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.

APPLICATION

- Fill fresh water into a clean container according to amount of mixture will prepared, approx. 7lt Water / 10kg
- Atışkan Satin Finishing Plaster sprinkles to cover the surface of water.
- After waiting for 2 minutes, slurry is stirred until it becomes homogeneous.
- The mixture is ready to be used within 60 minutes.
- Ready mixture is applied from bottom to up and right to left, two-way scraping with steel trowel.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- Avoid contact with skin and eyes. In case of contact wash with plenty of water.

PLASTER PRODUCTS

JOINT FILLING PLASTER

JOINT FILLING PLASTER

It is a gypsum-based joint filler which can be apply between 0-5mm thickness onto interior gypsumboard joints by hand.

ATIŞKAN
PLASTER PRODUCTS

BENEFITS

- Flexibility feature prevents cracking on joints.
- Creates a smooth surface.
- A1 class non-combustible material.

APPLICATION

- Fill fresh water into a clean container according to amount of mixture will prepared, approx. 6,5lt Water / 10kg Atışkan Joint Filling Plaster sprinkles to cover the surface of water.
- After waiting for 2 minutes, slurry is stirred until it becomes homogeneous.
- The mixture is ready to be used within 60 minutes.
- Atışkan Joint Tape is bonded to the center of gypsumboards joints.
- Ready mixture is applied on the joint tape with spatula, filled the gaps of screws.

APPLICATION AREAS

It can apply on gypsumboard joints, wall joints, crack surfaces etc. gaps for filler.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- Avoid contact with skin and eyes. In case of contact wash with plenty of water.

SURFACE PREPARATION

Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.

TECHNICAL CHARACTERISTICS

PLASTER PRODUCTS

ATIŞKAN
BUILDING
MATERIALS

PLASTER PRODUCTS 01

ADHESIVE PLASTER

It is a gypsum-based adhesive mortar which can be used to bond gypsumboard, insulation panels etc. construction materials for interior sites.

BENEFITS

- High durability and adhesion strength.
- A1 class non-combustible material.

APPLICATION

- Fill fresh water into a clean container according to amount of mixture will prepared, approx. 5lt Water / 10kg Atışkan Adhesive Plaster sprinkles to cover the surface of water.
- After waiting for 2 minutes, slurry is stirred until it becomes homogeneous.
- The mixture is ready to be used within 30 minutes.
- Ready mixture should be apply at fist size with 25cm gap, starts from corner to cover board's bonding surface.
- Boards should be pressed to the surface with a straight-edge and spirit level should be checked.

APPLICATION AREAS

It can apply to brick, concrete, gas concrete, briquet etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes air-flow.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- The bonding surfaces should not be exposed to moisture and water.
- Avoid contact with skin and eyes. In case of contact wash with plenty of water.

SURFACE PREPARATION

- Dry and hot surfaces should be wetted.
- Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.
- Atışkan Betontak Plaster Primer should be used to improve adhesion on ceilings, smooth and absorbent surface applications.

PLASTER PRODUCTS CORNICE PLASTER

ATIŞKAN
PLASTER PRODUCTS

ATIŞKAN
BUILDING
MATERIALS

PLASTER PRODUCTS 01

CORNICE PLASTER

It is a special gypsum type for interior used to manufacture and mount decorative cornices, domes, arches and buttresses etc.

BENEFITS

- Provides detailed and esthetic appearance with the fine particle structure.
- Have a high durability and surface hardness.
- Also can be used for repairing.
- A1 class non-combustible material.

APPLICATION AREAS

- It can apply to brick, concrete, gas concrete, briquet, plaster, gypsumboard etc. surfaces.

APPLICATION CONDITIONS

- Ambient temperature must be at least +5°C.
- Sections should be closed which causes airflow.

SURFACE PREPARATION

- Suitable debonder materials should be used to separate the gypsum from mold easily and smoothly.
- Before mounting, surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of plaster.
- Dry and hot surfaces should be wetted.
- Atışkan Betonlak Plaster Primer should be used to improve adhesion on ceilings, smooth and absorbent surface applications.

APPLICATION

- Fill fresh water into a clean container according to amount of mixture will prepared, approx. 7lt Water / 10kg Atışkan Cornice Plaster sprinkles to cover the surface of water.
- After waiting for 2 minutes, slurry is stirred until it becomes homogeneous.
- Ready mixture is spilled to mold slowly. Be careful to prevent air bubbles.
- To improve strength should spread fibers, and then spill second level.
- When the plaster starts to harden, the edges of the mold is scraped with spatula. In 30 minutes hardened casting is removed from the mold.

CAUTIONS

- Do not add any other material (lime, sand, etc.) into mixture.
- After the casting process, the mounting should not started without ensuring complete drying.

Pallet/Board	60 pcs./Pallet	50 pcs./Pallet	40 pcs./Pallet

ARTIPAN® Standard Plasterboard is composed of high purity reinforced of noncombustible gypsum core by the additives with the special surface cardboards at our high technology production line.

ADVANTAGES

- Through its special surface cardboards, it allows having a smooth surface and provide excellent base for ceramic and tile coating or prior to a variety of decorative applications by use of ATIŞKAN® Cement Based adhesive mortar.
- It minimizes problems arising from handling, application and use due to its high resistance,
- As a 'breathable' material, it balances the ambient humidity and helps formation of healthy environments.
- Besides being easy to prepare, apply and disassemble, it helps saving time and labor, permitting to pass the installation and insulation materials through the application cavities.
- Compared to the conventional wall applications, it considerably decreases the building wall loads and reduces the beam, column and slab sizes, thus minimizing the construction costs.

APPLICATION CONDITIONS

- It should not be applied under conditions at 4°C and below.
- The application should be made by auxiliary materials which should be in accordance with the standart.

APPLICATION AREA

Partition walls, cladding walls and suspended ceilings.

APPLICATION TOOLS

Drill

Line Laser

Craft Knife

SURFACE PREPARATION

- The application surface should be made free of any dust, dirt, grease, paint and weak decoration products. If required, the application surface is fixed with Esfix Joint Filling Mortar.

WARNINGS AND PRECAUTIONS

- For partition wall applications, maximum framing spacing should be 60 cm. in dry condition. In case of wet area, high wall and load bearing application, the framing spacing should be reduced down to 30cm.
- Depending on the conditions, DC profile width should be increased.
- For ceiling applications, the profiles are connected to the board direction as a parallel, the framing spacing should be 40 cm., If the connection is vertical, It should be 50 cm.

APPLICATION RESTRICTIONS

- When high level sound and thermal insulation is required, it should be used together with proper insulation material. For ceiling application, you should use extra fastening components.
- Any damaged board and auxiliary materials should be renewed and application should not be made by any defective materials.

STORAGE CONDITIONS

In order that the plasterboards are not damaged, store them on a flat and clean floor also It will not contact directly with the ground and should be stored in areas that offer protection against adverse conditions (condensation, humidity, etc.)

ARTIPAN® Fireproof Plasterboard is composed of high purity reinforced of noncombustible gypsum core by the additives and glass fiber with the special surface cardboards at our high technology production line

ADVANTAGES

- Through its special surface cardboards, it allows having a smooth surface and provide excellent base for ceramic and tile coating or prior to a variety of decorative applications by use of ATIŞKAN® Cement Based adhesive mortar.
- It minimizes problems arising from handling, application and use due to its high resistance, As a 'breathable' material, it balances the ambient humidity and helps formation of healthy environments.
- Besides being easy to prepare, apply and disassemble, it helps saving time and labor, permitting to pass the installation and insulation materials through the application cavities.
- Compared to the conventional wall applications, it considerably decreases the building wall loads and reduces the beam, column and slab sizes, thus minimizing the construction costs.
- It protects the structural members of the building due to its high fire resistance and provides emergency response corridors during fire

APPLICATION CONDITIONS

- It should not be applied under conditions at 4°C and below.
- The application should be made by auxiliary materials which should be in accordance with the standart.

APPLICATION SURFACES

Partition walls, cladding walls and suspended ceilings.

APPLICATION TOOLS

Drill

Line Laser

Draft Knife

SURFACE PREPARATION

The application surface should be made free of any dust, dirt, grease, paint and weak decoration products. If required, the application surface is fixed with Esfix Joint Filling Mortar.

WARNINGS AND PRECAUTIONS

- In case of partition walls, maximum axis opening of 60cm. should be allowed between the profiles for dry environment. For wet area, high wall and load bearing, the axis openings should be reduced down to 30cm.
- Depending on the conditions, DC profile width should be increased.
- For ceiling applications, the openings of the axis connected to the board direction, the axis openings should be 50cm. vertically and 40cm. horizontally.

APPLICATION RESTRICTIONS

- When high level sound and thermal insulation is required, it should be used together with proper insulation material.
- For ceiling application, you should use extra fastening components.
- Any damaged board and auxiliary materials should be renewed and application should not be made by any defective materials.

Flexural Strength (Perpendicular to Paper Fibers)	≥ 400 N	≥ 550 N	≥ 650 N
Flexural Strength (Parallel to Paper Fibers)	≥ 160 N	≥ 210 N	≥ 250 N
Type of edge	IK (Tapered edge) - KK (Square Edge)		
Thermal Conductivity Value (λ)	0,23 W/mK		
Fire Class	A2 - s1, d0 (as per TS: EN 520 Annex B)		
Core Strength (when exposed to fire)	≥ 15 min		
Coefficient of resistance to Water Vapor Transmission	10		
Standard	TS EN 520		

PACKAGING

Thickness	9,5 mm	12,5 mm	15 mm
Pallet/Board	60 pcs./Pallet	50 pcs./Pallet	40 pcs./Pallet

ARTIPAN® Waterproof and Fireproof is composed of high purity reinforced of noncombustible gypsum core by the additives and glass fiber with the special surface cardboards at our high technology production line.

ADVANTAGES

- Through its special surface cardboards, it allows having a smooth surface and provide excellent base for ceramic and tile coating or prior to a variety of decorative applications by use of ATİŞKAN® Cement Based adhesive mortar.
- It minimizes problems arising from handling, application and use due to its high resistance.
- As a 'breathable' material, it balances the ambient humidity and helps formation of healthy environments.
- As it is water repellent with low level of water absorption, it allows using at the wet areas and helps prevent water leakage.
- Besides being easy to prepare, apply and disassemble, it helps saving time and labor, permitting to pass the installation and insulation materials through the application cavities.
- Compared to the conventional wall applications, it considerably decreases the building wall loads and reduces the beam, column and slab sizes, thus minimizing the construction costs.
- It protects the structural members of the building due to its high fire resistance and provides emergency response corridors during fire.

APPLICATION CONDITIONS

- It should not be applied under conditions at 4°C and below.
- The application should be made by auxiliary materials which should be in accordance with the standard.

APPLICATION SURFACES

Partition walls, cladding walls and suspended ceilings.

APPLICATION TOOLS

Drill

Line Laser

Craft Knife

SURFACE PREPARATION

The application surface should be made free of any dust, dirt, grease, paint and weak decoration products. If required, the application surface is fixed with Esfix Joint Filling Mortar.

WARNINGS AND PRECAUTIONS

- For partition wall applications, maximum framing spacing should be 60 cm. in dry condition. In case of wet area, high wall and load bearing application, the framing spacing should be reduced down to 30cm.
- Depending on the conditions, DC profile width should be increased.
- For ceiling applications, the profiles are connected to the board direction as a parallel, the framing spacing should be 40 cm., If the connection is vertical, It should be 50 cm.

APPLICATION RESTRICTIONS

- When high level sound and thermal insulation is required, it should be used together with proper insulation material. For ceiling application, you should use extra fastening components.
- Any damaged board and auxiliary materials should be renewed and application should not be made by any defective materials.

STORAGE CONDITIONS

In order that the plasterboards are not damaged, store them on a flat and clean floor also It will not contact directly with the ground and should be stored in areas that offer protection against adverse conditions (condensation, humidity, etc.)

PLASTERBOARD 02

FIREPROOF CLASS A1 PLASTERBOARD

Class A1 Fireproof Plasterboard is composed of noncombustible gypsum core of high purity reinforced by the special glass fiber and additives with the special fireproof fiberglass mat at our high technology production line.

ADVANTAGES

- With its impact strength enhanced by use of special glass mat and made fireproof, it also allows having a smooth surface and excellent base for decorative applications.
- It minimizes problems arising from handling, application and use due to its high resistance. As a 'breathable' material, it balances the ambient humidity and helps formation of healthy environments.
- Besides being easy to prepare, apply and disassemble, it helps make savings on time and labor, allowing passing the installation and insulation materials through the application cavities.
- Compared to the conventional wall applications, it considerably decreases the building wall loads and reduces the beam, column and floor sizes, thus minimizing the construction costs.
- As it is fireproof Class A1 material, it protects against fire. With its performance and endurance period during fire, it allows formation of emergency response corridors. It minimizes the damage that the building bearing components may suffer.

APPLICATION CONDITIONS

- It should not be applied under conditions at 4°C and below.
- The application should be made by auxiliary materials which should be in accordance with the standard.

APPLICATION SURFACES

Partition walls, cladding walls, shaft walls, building components and suspended ceilings.

SURFACE PREPARATION

The application surface should be made free of any dust, dirt, grease, paint and weak decoration products. If required, the application surface is fixed with Estix Joint Filling Mortar.

WARNINGS AND PRECAUTIONS

- For partition wall applications, maximum framing spacing should be 60 cm. in dry condition. In case of wet area, high wall and load bearing application, the framing spacing should be reduced down to 30cm. Depending on the conditions, DC profile width should be increased.
- For ceiling applications, the profiles are connected to the board direction as a parallel, the framing spacing should be 40 cm. If the connection is vertical, It should be 50 cm.

APPLICATION RESTRICTIONS

- When high level sound and thermal insulation is required, it should be used together with proper insulation material. For ceiling application, you should use extra fastening components.
- Any damaged board and auxiliary materials should be renewed and application should not be made by any defective materials.

STORAGE CONDITIONS

In order that the plasterboards are not damaged, store them on a flat and clean floor also It will not contact directly with the ground and should be stored in areas that offer protection against adverse conditions (condensation, humidity, etc.)

SHIELDEx External Plasterboard is composed of noncombustible gypsum core with the addition of strong water repellent and special glass fibers which are chosen considering human health and nature, the coated with special fiberglass mat increase its strength against weather conditions at our high technology production line.

ADVANTAGES

- With its impact strength enhanced by use of special glass mat and made fireproof, it also allows having a smooth surface and excellent base for decorative applications.
- Through its high resistance, it minimizes problems arising from handling, application and use.
- As a 'breathable' material, it balances the ambient humidity and helps formation of healthy environments.
- As it is water repellent and enhanced low water absorption ratio (less than 3% by weight for 2 hours), it helps to prevent water leakage from the external wall on the buildings.
- Besides being easy to prepare, apply and disassemble, it helps saving time and labor, permitting to pass the installation and insulation materials through the application cavities.
- Compared to the conventional wall applications, it considerably decreases the building wall loads and reduces the beam, column and slab sizes, thus minimizing the construction costs.
- As it is fireproof Class A1 material, it protects against fire. With its performance and durability, It allows to create emergency corridors during fire also It minimizes the damage that the building load bearing components may suffer.

APPLICATION

For different external wall systems, you may find the respective application details at the system manuals.

APPLICATION AREA

External wall systems, eaves wall applications, building shaft wall construction, wet areas and coating of building components.

APPLICATION TOOLS

Drill

Line Laser

Craft Knife

SURFACE PREPARATION

- For coating on the existing wall, solid application surface should be obtained at the points where the steel connection elements fixing the board installation profiles to the wall.
- For Profile Frame System application, If any considerable roughness exist at the application area must be removed, If there are any deep and great cavities, those should be filled with ESFIX Joint Filling Mortar.

WARNINGS AND PRECAUTIONS

- Application should be made properly with the recommended materials. Profile and materials should never be poor quality.
- The screws to be used should be corrosive-resistant and the profiles should be galvanized according to the external wall conditions.
- If there will be mounting such as sign and air-conditioner on the Shieldex, the columns and beams should be used or special supporting components can be used.

APPLICATION RESTRICTIONS

- It should be used proper size of insulation material between the profiles.
- Any damaged board and auxiliary materials should be renewed and application should not be made by any defective materials.

STORAGE CONDITIONS

In order that the plasterboards are not damaged, store them on a flat and clean floor; also It will not contact directly with the ground and should be stored in areas that offer protection against adverse conditions (condensation, humidity, etc.)

SUSPENDED CEILING BOARDS 04 WHITE (TEXTURED)

TAVPAN Suspended Ceiling Board is composed of the coated front surface of high quality ARTIPAN Plasterboards with the self-patterned PVC and the back surface coated with the aluminum foil

ADVANTAGES

- It provides aesthetic appearance to the applied area.
- Its smooth surface is not easily deformed due to its strength against breaking and bending. It is a durable.
- It allows quick installation due to its thin and light form.
- It provides sound insulation and thermal insulation.
- It makes the spaces well-lighted due to its light reflection.
- It balances ambient humidity and has a high moisture resistance.
- It has a fire resistance.
- Installation and removal of the boards is simple and it is easy to clean the surface as a result. Furthermore, It allows easy access to the behind of installation.

APPLICATION AREA

Places with high level of humidity and vapor such as kitchen and dining halls; hygienic area such as hospital and laboratories as well as residences, offices and shopping centers.

SURFACE PREPARATION

The application surface should be made free of any dust, dirt, grease, paint and weak decoration products.

WARNINGS AND PRECAUTIONS

- Installation of the boards should be started from the edges to the center.
- The heat-generating elements should be insulated and the heavy and moving components should be supported by special materials.

STORAGE CONDITIONS

In order that the suspended ceiling boards are not got damaged, store them on a flat and clean floor also It will not contact directly with the ground and should be stored in areas that offer protection against adverse conditions (condensation, humidity, etc.)

APPLICATION CONDITIONS

- Boards and systems should be chosen according to the ambient conditions and intended use.
- It should not be applied under conditions at 4°C and below.
- The application should be made by auxiliary materials which should be in accordance with standard.

APPLICATION RESTRICTIONS

In case of high level sound and thermal insulation is required, It should be used together with proper insulation material and the number of the fastening elements should be increased.

YAPIFIX is a cement based ceramic tile adhesive with reduced slip.

ADVANTAGES

- Easy to apply.
- High adhesion strength
- Reduced slip

FIELDS OF APPLICATION

It is applied on the cement based plaster, screed and concrete on the horizontal and vertical surfaces.

APPLICATION

Pour 25 kg of YAPIFIX into 6-7 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps. Allow the mortar to rest for 5 minutes. Mix it again prior to the application. Spread the mortar onto the substrate then notch with the toothed side of trowel. Application of large tiles YAPIFIX should be applied also on the back of tiles.

SURFACE PREPARATION

- All substrates must be strong, dry, clean and free from oil, grease, dust.
- Surface irregularities, cracks and holes should be repaired by YAPIPLUS, Repair Mortar.
- The substrates must be primed with BETONTAK before bonding of tiles on existing ceramic tiles.

WARNINGS AND PRECAUTIONS

- The specified times are for the ambient temperature at 20°C; it takes longer at lower temperature, and shorter at high temperature.
- Never add any foreign materials.
- Clean all tools and hands with water after application.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C.
- It should not be applied to the surfaces subject to the risk of freezing.
- Do not apply when the weather is too humid or too hot.

PROFIX is a cement based high performance adhesive with reduced slip and extended open time.

ADVANTAGES

- Easy to prepare and apply
- Extended open time
- Can be applied on vertical surfaces without sagging.
- High adhesion performance
- Resistant to freezing and thawing conditions
- High deformable ,resistant to the temperature changes.

FIELDS OF APPLICATION

- Indoor and outdoor granite and ceramic applications, swimming pools, water tanks, in underfloor heating surfaces and tiles of cold storage places.
- Floor and wall bonding of all types of ceramic tiles, marbles and decorative tiles, cementitious screeds and concrete.
- Bonding of tiles on existing ceramic tile.

APPLICATION

- Pour 25 kg of PROFIX into 6,5-7,5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- After resting it for 5 minutes remix it for 1-2 minutes. PROFIX is ready to use. Spread the mortar onto the substrate then notch with the toothed side of trowel. Open time is 30 minutes. Install the tiles within this period with pressure. It is better to apply PROFIX for both of the surfaces for the use of granites and big sizes of the ceramic tiles.

SURFACE PREPARATION

- All substrates must be strong ,dry, clean and free from oil, grease,dust .
- Surface irregularities, cracks and holes should be repaired by use of YAPIPLUS, Repair Mortar.
- The substrates must be primed with BETONTAK BINDER before bonding of tiles on existing ceramic tiles.

WARNINGS AND PRECAUTIONS

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C.
- It should not be applied to the surfaces subject to the risk of freezing.
- Do not apply when the weather is too humid or too hot.

YAPISTAR
AERATED CONCRETE ADHESIVE

YAPISTAR is a cement based masonry mortar for bonding of aerated concrete blocks.

ADVANTAGES

- High adhesion property
- Easy to prepare and apply
- Low labor cost

FIELD OF APPLICATION

Bonding of aerated concrete and any other high water absorbing construction elements.

APPLICATION

- Pour 25 kg of YAPISTAR into 6,5-7,5 litres of clean water slowly and mix to obtain a homogeneous mortar free from lumps. After resting it for 5 minutes remix it for 1-2 minutes. YAPISTAR is ready to use.
- Apply YAPISTAR onto the substrate with notched trowel. Work in small areas at a time and fix blocks immediately (approx. in 15 minutes.)

SURFACE PREPARATION

- Any dust on the surface should be removed off.
- For elimination of any irregularity on the floor, the first row should be laid by leveling.

WARNINGS AND PRECAUTIONS

- The specified times are for the ambient temperature at 20°C; it takes longer at lower temperature, and shorter at high temperature.
- Never add any foreign materials. Clean all tools and hands with water after application

64 pcs. / 1280kg

ADVANTAGES

- Easy to prepare and apply
- Avoid cracks
- Good wear resistance
- Low water absorption with water repellency
- Available in 15 different colors and silicone enhanced types

APPLICATION

Pour 20 kg of ESFIX into 6-7 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps. Amount of water should be precisely measured. After resting it for 5 minutes remix it for 1-2 minutes. ESFIX is ready to use. Fill the joints completely with ESFIX using the appropriate rubber trowel. Remove excess ESFIX from the surface with diagonal moves. Wait for the setting of the material and repeat this procedure. After that clean the surface with a damp sponge give the final shape to the material. Any residue left can be cleaned from the surface with a clean dry cloth.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply when the weather is too hot.

FIELDS OF APPLICATIONS

All interior areas of hotels, shopping centers and buildings floor and wall grouting of ceramic tiles, mosaics and marble for 1-6 mm joints.

SURFACE PREPARATION

- The joints must be clean and free of dust. It is better to dampened with a wet sponge.
- Wait until the adhesive has completely achieved sufficient hardness.

WARNINGS AND PRECAUTIONS

- Excess water can cause cracking and colour defects.
- Clean tools and containers with plenty of water before ESFIX hardens.
- Never add any foreign materials.
- It is recommended to wet the joints next day to improve the final performance.

A-THERM 101
THERMAL INSULATING BOARD ADHESIVE MORTAR

A-THERM 101 is a cement based thermal insulation board adhesive with excellent bonding strength.

ADVANTAGES

- Easy to prepare and apply
- Perfect adhesion

APPLICATION SURFACES

A-THERM 101 can be used as adhesive for all kind of heat insulation sheets on the bricks, cement based plasters, gas concrete and similar surfaces.

APPLICATION

- Pour 25 kg of A-THERM 101 into 5,5-6,5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps. After resting it for 5 minutes remix it for 1-2 minutes. A-THERM 101 is ready to use.
- Apply A-THERM 101 to the back side of the sheet as a strip and also a point on the center of the sheet.
- A-THERM 101 should be applied all around of insulation board and 5 mm of space should be left from the edges all around the board. Show attention that minimum 40% of the insulating board is covered by the adhesive.
- Then, fix the sheets onto the wall by pressure. During installation check the level of the boards with a gauge.

SURFACE PREPARATION

All substrates must be strong ,dry ,clean and free from oil, grease,dust . If needed repair the surface with YAPIPLUS to get a sound and flat surface two days before the application

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply on the surfaces subject to the risk of freezing.
- It should not be used on substrates which are weak and low resistance.

WARNINGS AND PRECAUTIONS

Insulation boards should be placed each other closely, gaps between boards should be as few as possible.

PERFORMANCE

A-THERM 102
THERMAL INSULATING BOARD PLASTER

A-THERM is a fiber reinforced, cement based thermal insulation board plaster.

ADVANTAGES

- Easy to prepare and apply
- Fiber reinforcement avoid cracks.
- Excellent breathing capability

APPLICATION SURFACES

A-THERM 102 can be used as a plaster for all kind of heat insulation boards such as XPS, EPS and Stonewool.

APPLICATION

- Pour 25 kg of A-THERM 102 into 5,5-6,5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps. After resting it for 5 minutes remix it for 1-2 minutes. A-THERM 102 is ready to use.
- Apply A-THERM as a single layer (2-3 mm) on the heat insulation board by steel trowel
- Then, fix the mesh onto the first layer gently with steel trowel before it dries. Make overlaps for about 10 cm at the joints of the plaster mesh. After 3-4 hour apply the second layer of A-THERM 102.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply on the surfaces subject to the risk of freezing.
- Avoid application when the weather is too humid or very hot or directly under the sunlight.

WARNINGS AND PRECAUTIONS

- Do not use the materials which shelf life expired.
- All tools should be washed with water after application.
- No additive should be added into the mortar.
- The specified terms are for the ambient temperature of 20°C; it may extend at the lower temperature; and shortens at the higher temperature.

SURFACE PREPARATION

- All substrates must be strong, dry, clean and free from oil, grease, dust.
- Boards have to be strongly adhered on the surface.

CONSTRUCTION CHEMICALS

ATIŞKAN
BUILDING
MATERIALS

CEMENT BASED
CONSTRUCTION CHEMICALS **05**

A-THERM 121
THERMAL INSULATING BOARD PLASTER AND ADHESIVE MORTAR

Cement based product used for bonding and plastering of any kind of thermal insulating boards. (XPS, EPS and ROCKWOOL)

ADVANTAGES

- Easy to prepare and apply
- Fiber reinforcement avoid cracks.
- High adhesion property
- Excellent breathing capability

APPLICATION SURFACES

It can be used for plastering and bonding of the thermal insulation boards to the surface of brick, cement-based plasters, aerated concrete, concrete, etc.

APPLICATION

- Pour 25 kg of A-THERM 121 into 5,5-6,5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- After resting it for 5 minutes remix it for 1-2 minutes. A-THERM 121 is ready to use.
- Apply A-THERM 121 to the back side of the sheet as a strip and also a point on the center of the sheet.
- A-THERM 121 should be applied all around of insulation board and 5 mm of space should be left from the edges all around the board. Show attention that minimum 40% of the insulating board is covered by the adhesive.
- Then, fix the sheets onto the wall by pressure. During installation check the level of the panels with a gauge. After this application you can continue with A-THERM 121 as a plaster. Apply A-THERM 121 as a single layer (2-3 mm) on the heat insulation sheet by steel trowel
- Then, fix the mesh onto the first layer gently before it dries. Make overlaps for about 10 cm at the joints of the plaster. After 3-4 hour apply the second layer of A-THERM 121

SURFACE PREPARATION

All substrates must be strong ,dry ,clean and free from oil, grease,dust .

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Avoid application on the surfaces subject to the risk of freezing.
- It should not be used on substrates which are weak and low resistance.

WARNINGS AND PRECAUTIONS

- The specified terms are for the ambient temperature of 20°C; it may extend at the lower temperature; and shortens at the higher temperature.
- Insulation boards should be placed each other closely; gaps between boards should be as few as possible.

Cement based white decorative exterior coating material.

ADVANTAGES

- Easy to prepare and apply.
- A special decorative textured surface appearance
- Available in 3 types :coarse grain size D20 , fine grain size D15 and line texture
- Excellent breathing capability

APPLICATION

- Pour 25 kg of Natural Decorative Coating into approx.5,5-6 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- After resting it for 5 minutes remix it for 1-2 minutes. Natural coating is ready to use.
- Apply NATURAL as a single layer by steel trowel on to the surface . Desired pattern is formed on the wet surface by using a plastic trowel . Apply plastic trowel in circular movements to gain texture(D15,D20)and vertical and horizontal movements to line texture.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply on the surfaces subject to the risk of freezing.

APPLICATION SURFACES

It is used as topcoat decorative coating on the bricks, cement based plasters, gas concrete, exposed concrete and similar surfaces.

SURFACE PREPARATION

- All substrates must be strong, dry , clean and free from oil, grease and dust and also in balance.
- The surface should be saturated with water and damp prior to application.

WARNINGS AND PRECAUTIONS

- The specified terms are for the ambient temperature of 20°C; it may extend at the lower temperature; and shortens at the higher temperature.
- Never add any foreign materials.
- All tools used during the application should be washed with water.

CEMENT BASED
CONSTRUCTION CHEMICALS 05

MASSIVA
READY MIXED MACHINE PLASTER

MASSIVA is a cement based high performance ready mix machine plaster with perlite.

ADVANTAGES

- Easy to prepare and apply
- Use both machine and hand
- Resistant to water and humidity

APPLICATION SURFACES

Indoor and outdoor faces of the buildings, aerated concrete blocks, bims, bricks and ceilings.

APPLICATION

- Massiva is mixed with plaster mixing and spreading machine (8-10 lt water / 40 kg bag) and sprayed to the surface.
- Surface is leveled.
- Massiva is trifiled when the surface becomes hard enough after that the surface is finished by a dampened sponge.
- The application thickness should be between 1 cm. and 2.5 cm in one coat, and if the thickness is higher than 2.5 cm, it is applied after the first coat gets dry.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply on the surfaces subject to the risk of freezing.
- No application should be made on the surfaces not sound and with low resistance.

WARNINGS AND PRECAUTIONS

- It is better to use BETONTAK on ceilings and concrete before the application of MASSIVA.
- Never add any foreign materials.
- The thickness should be maximum 2.5 cm. for the first coat.
- Watering the surface in certain intervals would enhance durability of the product.

SURFACE PREPARATION

- All substrates must be strong, clean, free from oil, grease, dust and dry.
- If needed repair the surface with YAPIPLUS to get a sound and flat surface two days before the application.

APPLICATION TOOLS

YAPIPLUS is a cement based polymer modified repair mortar.

ADVANTAGES

- Easy to prepare and apply
- High thixotropic properties.
- Perfect adherence to the concrete surfaces.
- Forms a smooth and sound surface.

SURFACE PREPARATION

- All substrates must be strong, clean, free from oil, grease, dust and dry.
- Loose parts with low adherence should be removed from the surface.
- The surface should be dampened prior to the application.

APPLICATION

- Pour 25 kg of YAPIPLUS into 5,5-6,5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- After resting it for 5 minutes remix it for 1-2 minutes. YAPIPLUS is ready to use.

FIELD OF APPLICATION

Repairing and plastering the concrete surfaces and defects on the concrete surfaces before coating applications.

Levelling

- YAPIPLUS should be applied to the prepared surface by using a steel trowel. The surface should be finished with using wet sponge. Application thickness for one layer should be between 5-10 mm, for double layer 20 mm. Second layer should apply after the first layer totally dry.

APPLICATION CONDITIONS

- Application temperature range of 5°C - 35°C
- Do not apply when the weather is very hot.

Repairing

The substrate must be free from mortar. Make a V cutaway along the crack. Then apply YAPIPLUS by using steel trowel.

WARNINGS AND PRECAUTIONS

- The specified terms are for the ambient temperature of 20°C; it may extend at the lower temperature; and shortens at the higher temperature.
- Never add any foreign materials. All tools used during the application should be washed with water.

CEMENT BASED
CONSTRUCTION CHEMICALS 05

LEOPLUS D4
SATIN FINISHING PLASTER

LEOPLUS is a cement based polymer modified fine finishing mortar.

ADVANTAGES

- Easy to prepare and apply
- Smooth and sound surfaces
- Reduce painting cost
- Resistant to water and frost.

FIEL OF APPLICATION

Repairing cracks as well as for smoothing walls and ceiling areas on the internal and exterior surfaces and on the cement plaster application.

APPLICATION

- Pour 25 kg of LEOPLUS into 9-10 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- After resting it for 5 minutes remix it for 1-2 minutes. LEOPLUS is ready to use. LEOPLUS should be applied to the prepared surface by using a steel trowel. After 20-30 min. When the surface become dry, it should be finished by using wet sponge.

APPLICATION CONDITIONS

- Application Temperature Range: (+5°C) - (+35°C)
- Do not apply on the surfaces, frozen or exposed to risk of freezing.
- Avoid application when the weather is very hot.

WARNINGS AND PRECAUTIONS

- The specified terms are for the ambient temperature of 20°C; it may extend at the lower temperature; and shortens at the higher temperature.
- Never add any foreign materials.
- All tools should be should be washed with water after application.

SURFACE PREPARATION

- All substrates must be strong, clean, free from oil, grease, dust and dry.
- Cracks and holes should be repaired by use of Yapiplus Repairing Mortar.
- The surface should be dampened prior to the application.

SELF LEVELLING SCREED SELFLOOR

ATIŞKAN
CONSTRUCTION CHEMICALS

ATIŞKAN
BUILDING
MATERIALS

CEMENT BASED
CONSTRUCTION CHEMICALS **05**
SELFLOOR
SELF LEVELLING SCREED

Cement based self levelling flooring cozzmpound It can spread in thicknesses up to 10mm.

ADVANTAGES

- Perfectly self levelling.
- High adhesion strength.
- Easy to prepare and apply
- Develops very high compressive and flexural strength.

APPLICATION

- Application thickness should be determined according to the surface smoothness and porosity.
- Pour 25 kg of SELFLOOR into 6-6.5 litres of clean water slowly and mix with a low speed mixer to obtain a homogeneous mixture free from lumps.
- Allow to rest 2 minutes to mature.
- After remixing, the paste is ready for application.
- Use the mixture within 20 minutes of preparation.
- Pour out the mix onto the surface and distribute evenly with a smoothing trowel. Flow and surface quality can be improved by removing air from the fresh compound using the spike roller.
- The effects of the roller and trowel will be disappear rapidly because of its perfect selflevelling property.
- Wait 24 hours to apply the floor coverings.

FIELDS OF APPLICATION

Floors subject to cover with laminated parquet, carpet, PVC and ceramic and high loads and heavy traffic like depots against dusting and abrasion.

SURFACE PREPARATION

- All substrates must be strong, dry, clean and free from oil, grease, dust.
 - Wait until the concrete has completely achieved sufficient hardness.
 - Use YAPIPLUS repairing mortar in case of surface irregularities to get a sound and flat surface.
- Very porous concrete surfaces must be treated with binder before the application.

APPLICATION CONDITIONS

- Application Temperature Range: (+5°C)(+35°C)
- Do not apply when the weather is too hot.
- It should not be applied to the surfaces subject to the risk of freezing.

WARNINGS AND PRECAUTIONS

- Never add any foreign materials
 - Do not add any more water
- The specified consumption and time may vary depending on the thickness of the levelling, the temperature and humidity of the room.
- Hands and equipment used should be washed well after application

BETONTAK 404 CONCENTRATED

BETONTAK 404 primer is a polymer based concentrated product designed to increase the adhesion strength of gypsum and cement based plasters on smooth and glossy surfaces.

ADVANTAGES

- Easy to prepare and apply.
- Extends working time for cement and gypsum based products.
- High adhesion property
- Reduce water absorption on the surface.
- Prevents cracks on the surface of gypsum and cement based plasters.

APPLICATION SURFACES

- For indoor and outdoor applications.
- Smooth and glossy surfaces such as tile, marble, plywood and plasterboard.
- For EPS and XPS thermal insulation boards.

APPLICATION CONDITIONS

- Application Temperature Range: (+5°C) - (+35°C)
- Protect the surface against airflow and rain during the application

APPLICATION

- Add approx. 6 lt water into the 15 kg BETONTAK 404 and 5lt water into the 12 kg BETONTAK 404 Mix well until a homogenous consistency is obtained. Repeat mixing continuously during application.
- Apply prepared BETONTAK 404 with a roller. Start a new application after BETONTAK 404 is completely dry (approx. 24 hr). Drying time may vary depending on the weather conditions.

WARNINGS AND PRECAUTIONS

Do not add any additive to the mortar. Avoid contact with eyes and skin. In case of contact, immediately flush eyes and skin with plenty of water

SURFACE PREPARATION

All substrates must be strong, dry, clean and free from oil, grease and dust.

BETONTAK 707
READY TO USE

BETONTAK 707 Ready To Use primer is a polymer based product designed to increase the adhesion strength of gypsum and cement based plasters on smooth and glossy surfaces.

ADVANTAGES

- Ready to use
- Easy to prepare and apply.
- Extends working time for cement and gypsum based products.
- High adhesion property
- Reduce water absorption on the surface.
- Prevents cracks on the surface of gypsum and cement based plasters.

APPLICATION

BETONTAK 707 is ready to use. Dilution is not required. (Unless applied by machine: add a little water so that it can be sprayed.) Stir before use. Repeat mixing continuously during application. Apply BETONTAK 707 with a roller. Start a new application after BETONTAK 707 is completely dry (24 hr). Drying time may vary depending on the weather conditions.

APPLICATION SURFACES

- For indoor and outdoor applications.
- Smooth and glossy surfaces such as tile, marble, plywood and plasterboard.
- For EPS and XPS thermal insulation boards.

APPLICATION CONDITIONS

Application Temperature Range:
(+5°C) - (+35°C)

ATIŞKAN
BUILDING
MATERIALS

ALL PURPOSE JOINT COMPOUND **07**
READYMIX
ALL PURPOSE JOINT COMPOUND

It is a ready to use compound, used for joint filler and repair purposes and additionally apply as topping coat material for interior sites. This compound contains high quality fomulation which combines binding and flexibility properties and enables all purpose usage by a single product. It's superior performance allows simple, easy and quick application. It forms an excellent ready to paint surface without any extra material.

ADVANTAGES

Ready to use
High adhesion and binding
High flexibility and crack resistance.
Easy to apply
Sound and smooth surface
Low paint consumption

FIELD OF APPLICATION

Gypsumboards and joints
Concrete, gypsum plaster and wooden
surface,
Metal profiles and corner beads.

SURFACE PREPARATION

Surfaces should be cleaned from
substances (dust, dirt, oil, paint, etc.) which
are preventing adhesion of compound.

APPLICATION CONDITIONS

Ambient temperature should be minimum
+10°C.
Air-drift areas should be closed.

WARNINGS AND PRECAUTIONS

Do not add any other material (water,
plaster, lime, sand, etc.) to the mixture.
Avoid of its contact with the eye and
skin. In case of contact, wash with
plenty of water.

APPLICATION TOOLS

APPLICATION

1. Taping:

Fill ATIŞKAN READYMIX in a thin
layer by using spatula on the joints of
gypsumboard to bond the tape.
Cut the joint tape to the desired length
and coat by centering on the joints of
the gypsumboard. Be careful that there
should be minimum 1mm thickness
ATIŞKAN READYMIX under the joint
tape.
Also at this step, the corner beads are
fixed by ATIŞKAN READYMIX.
Please wait to harden and dry.

2. Filling the Joints:

2nd layer of ATIŞKAN READYMIX is
applied on the coated joints about
200mm width.
At this step, be sure that all joints, corner
beads and screw holes are completely
filled.
Before the coating step, allow sufficient
time for drying before proceeding to the
coating step.

3. Topcoat Process:

Apply ATIŞKAN READYMIX in double
direction by scrapping vertically and
horizontally on ready to coat and
dry surface by using steel trowel. All
surfaces should be coated minimum
2mm thickness to have a smooth and flat
surface ready to paint.
Sanding may be performed when it
hardens and dries in about 24 hours.
If it will be used for repair purpose, the
application thickness should be adjusted
according to surface conditions.

ALL PURPOSE JOINT COMPOUND 07 READYMIX EX 200C ALL PURPOSE JOINT COMPOUND

*It is a ready to use acrylic flexible joint filler and repairing putty for exteriors.
It forms an excellent ready to paint surface without any extra material.*

ADVANTAGES

Ready to use
Easy to apply
Perfect smooth surfaces
High adhesion and bond strength
Fast drying time
High flexibility and crack resistance
Excellent breathing capability
Because of its coarse form, it does not collapse

FIELD OF APPLICATION

Repairing all kind of cracks and filling the joints on all kind of gypsumboards, other exterior boards, concrete, wooden surfaces, metal profiles and corner beads.

SURFACE PREPARATION

Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of compound.

APPLICATION CONDITIONS

Application temperature range: (+5 °C)-(+35 °C)
Lower temperatures and/or higher relative humidity will lengthen the drying process.

WARNINGS AND PRECAUTIONS

Do not add any other material to the mixture.
Avoid contact with eye or skin. In case of contact, wash with plenty of water.

APPLICATION TOOLS

APPLICATION

1. Taping:

Fill ATIŞKAN READYMIX in a thin layer by using spatula on the joints of gypsumboard.
Cut the joint tape to the desired length and coat by centering on the joints of the gypsumboard. It should be min. 1mm thickness READYMIX under the joint tape.
Fix the corner beads with READYMIX.
Wait until it dries and hardens.

2. Filling the Joints:

- Apply 2nd layer of the READYMIX about 200mm width on to the coated joints.
- Before the coating step allow sufficient time for drying.

3. Topcoat Process:

- Apply READYMIX in double direction by scrapping vertically and horizontally on ready to coat and dry surface by using steel trowel.
- All surfaces should be coated minimum 2mm thickness to have a smooth and flat surface ready to paint.
- Sanding may be performed when it hardens and dries in about 24 hours.

4. Repairing:

- If READYMIX will be used for repairing purpose, the application thickness should be adjusted according to surface conditions.

ALL PURPOSE JOINT COMPOUND READYMIX EX 200F

ALL PURPOSE JOINT COMPOUND 07
READYMIX EX 200F
ALL PURPOSE JOINT COMPOUND

readymix
EX 200F

Acrylic emulsion based ready to use fine surface smoothing putty also designed to cover the surface defects of exteriors.

ADVANTAGES

- Ready to use
- Easy to apply
- Perfect smooth surfaces
- High adhesion and bond strength
- Low paint consumption
- Fast drying time
- High flexibility and crack resistance
- Excellent breathing capability
- Does not crumble and form any blister

APPLICATION

1. Topcoat process:

Apply READYMIX in double direction by scrapping vertically and horizontally on ready to coat and dry surface by using steel trowel. All surfaces should be coated minimum 2mm thickness to have a smooth and flat surface ready to paint. Sanding may be performed when it hardens and dries in about 24 hours.

FIELD OF APPLICATION

Repairing all kind of cracks and filling the joints on all kind of gypsumboards, other exterior boards, a Smoothing and filling hairy cracks on all kind of gypsumboards, other exterior boards and joints, concrete, wooden surfaces, metal profiles and corner beads, wooden surfaces, metal profiles and corner beads.

2. Repairing:

- If READYMIX will be used for repairing purpose, the application thickness should be adjusted according to surface conditions.

SURFACE PREPARATION

Surfaces should be cleaned from substances (dust, dirt, oil, paint, etc.) which are preventing adhesion of compound.

WARNINGS AND PRECAUTIONS

Application temperature range : (+5 °C) - (+35 °C)
Lower temperatures and/or higher relative humidity will lengthen the drying process.

WARNINGS AND PRECAUTIONS

Do not add any other material to the mixture.
Avoid contact with eye or skin. In case of contact, wash with plenty of water.

FLOORING MODELS

SLATE MEMBRANE

It is formed by coating of the visible surface of the membrane with a protective layer consisted of the slate granules in various colors.

ATP-AR SERIES

Polyethylene Film
Modified Bitumen Reinforced by APP or SBS
Fiberglass or Polyester Felt Support
Modified Bitumen Reinforced by APP or SBS
Mineral Natural Slate

ALUMINIUM FOLIO

Coated by aluminum to use on a number of details such as the terraces, roofs, parapet, chimneys, inclined gutters and concealed gutters.

ATP-AL SERIES

Polyethylene Film
Modified Bitumen Reinforced by APP or SBS
Fiberglass or Polyester Felt Support
Modified Bitumen Reinforced by APP or SBS
Aluminium Folio

ADVANTAGES

Ensure continuity in the waterproofing.

Protect the building strength acting as an extra reinforcement in the concrete.

Extend life of the building.

Maintenance-free, cost effective and long-lasting.

Flexible and high strength against tear.

Stable at high and low temperature.

Quick and easy to apply.

Chemical-resistance is perfect.

Application Standard specified.

Slated products offer high performance solutions for applications requiring UV resistance.

FIELDS OF APPLICATION

FOR INSULATION OF FOUNDATION AND FOUNDATION WALL

CONVENTIONAL TERRACE ROOF

CHIMNEY FLASHING

BRIDGES AND VIADUCTS

CAR PARKS AND GARAGES

TUNNELS

SWIMMING POOL

Water Insulation
Protects
the Building

APPLICATION CONDITIONS

• Never apply ATSER membrane in case of rain, snow, humidity and frost.

• Materials which is used in cold weather should be conditioned at normal room temperature before 24 hours.

• Do not apply it when it is colder than +5°C.

> +5°C

APPLICATION TOOLS

Welding Torch

Trowel

SURFACE PREPARATION

- The surfaces where Atser waterproofing membrane is applied should be flat, smooth and free of any foreign materials such as oil, any strain etc. that can damage the waterproofing.
- There should be no areas and cavities that may penetrate through the insulation.
- As any moisture that may remain between the membrane and surface would later cause bubble formation, the concrete surfaces should not be wet and the proper setting time of the concrete should be allowed.

APPLICATION

- Applied against pressure or non-pressure water in the foundations, ATSER MEMBRAN should not be less than 3mm. in thickness.
- Foundation wall water insulation should be tend minimum 20cm – 30cm. above the ground level.
- Two layers of ATSER membrane should be used for waterproofing on the roofs flat or include up to 5%.
- On the roofs, ATSER membrane should be laid perpendicular to the inclination from the lowest points of the inclination (water downpipe and gutter mouths).
- 2nd layer of membrane should be centered on the longitudinal and transversal joints of the first layer of membrane and heated and adhered completely.
- ATSER membrane longitudinal overlaps should be minimum 10cm. and the transversal overlaps should be minimum 15cm.
- ATSER membrane and surface should be heated together. And fusion welding should also be applied to the overlaps. Upon completion of the adhesion of the bitumen melted by welding torch, it should not protrude from the overlapping points and the protruded part should be pressed by spatula or trowel (in such a way that the fiberglass or polyester felt not to be exposed).
- Side overlaps of the slate membranes are adhered on the strips in thickness of 10cm. prepared without slate. In case of head overlaps, the part of 15 cm. is heated and the stones should be scraped off from the surface by help of trowel.

INGENIOUS SOLUTIONS FOR THE BUILDINGS

WAREHOUSING AND STORAGE CONDITIONS

Avoid of making any sign on the membrane by cleats, small objects or sharp edges

Pallets should not be placed on each other.

Rolls should be stored vertically at all times.

When product is taken from the unpacked pallets as required, the remaining should be left tied together.

Rolls should be placed vertically on the transportation vehicle.

Necessary measures should be taken to prevent the rolls loaded on the vehicle from being crushed and turned over.

Rolls should not be exposed to sudden and hard impacts during loading and unloading.

Necessary measures should be taken against any possible turnover and crushing during loading.
